Discover the benefits of Aquaritin Lakes

Improves water quality

Aquaritin Lakes™ is an advanced Nano Scale formulation which combines a balanced mix of 13 nutrients in a single formulation for explosive growth of native diatoms. As only diatoms are made of silicon and oxygen, our silica based formulation is exclusively consumed by them. Diatoms photosynthesise earlier in the day and consume the N and P in the water thus outcompeting blue-green and green algae.

Benefits of Aquaritin Lakes

- Improved water clarity
- Algae prevention
- Elimination of foul odor
- Marine life health and diversity
- Increased dissolved oxygen
- Reduction in fecal coliform

Applications

Curative rate:
2 litres per 14 million litres water per week

Maintenance rate:
1 litre per 14 million litres per week
